Document B

The best cloud backups won't let your data be lost to a flood or fire

Best Cloud Backup Services

The best cloud backup solutions can help you avoid disastrous data loss. Each service constantly copies your personal data from your computer (or multiple computers) to far-off cloud storage servers that can be reached from anywhere you can get internet access.

This is necessary to have because you can't count on local backup drives to always protect your data. An external backup drive attached to your PC, or as a stand-alone backup device on your home network, may fall victim to the same flood, fire or theft that takes out your computer, leaving you with nothing.

Conscious of this, many businesses and other enterprises rely on "off-site" backups to minimize the threat of physical disasters. Cloud-backup services provide this same peace of mind to consumers.

Each cloud-backup service we've tested — Acronis True Image, Backblaze, Carbonite Safe, CrashPlan for Small Business, IDrive Personal and SpiderOak One — uses industry-standard encryption on their own servers to protect your data.

Each service also lets you encrypt your data with your own private key. But if you lose that key, the service can't help you recover the data.

MISE EN SITUATION

You are an IT technician in an accounting firm. The manager is worried about data storage. He has heard of possible data breaches. How can you reassure him?

QUESTIONNEMENT

What are the possibilities for data storage?

Which one is the safest and easiest?

What are the steps employees should take to keep data safe?
